Industry experts in Autodesk 3D Design Software & Training

CADSPEC
STANFORD MARSH GROUP

AUTODESK
Authorized Training Center

Cadspec is one of the UK's leading suppliers of 2D and 3D CAD/CAM software from Autodesk.

With a wealth of technical expertise gained from working with organisations of all sizes and industries and working both in the Manufacturing and Architectural sectors, Cadspec is ideally placed to review your CAD & CAM design requirements and find the right solution for you.

P4 — Training
Maximise your productivity and return on investment by Autodesk Accredited Training

P5 — Software
Autodesk software helps you machine, print, inspect and fabricate better quality parts, faster

P6 — Consultancy & Support
From help desk assistance to onsite services we can provide you with all the technical support you need

P7 — BIM
Innovate and compete with Cadspec's Building Information Modelling (BIM) Consultancy service
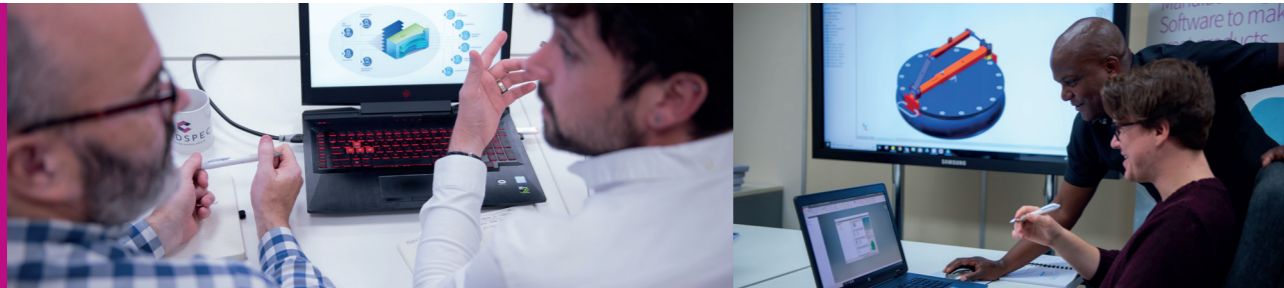

Training

Invest in your business's capabilities with expert led, Autodesk accredited training.

Here at Cadspec, we believe an investment in knowledge is one of the best investments you can make for the future of your business. Whether you've recently purchased a new CAD system, or you have recently upgraded software, Cadspec offer a wide variety of both beginner and advanced level courses that aim to empower your team to get the most out of the software. Our team is made up of industry experts who are passionate about the fields they specialise in, and who are enthused about sharing this knowledge. We understand that the rate of technological change is fast, and keeping up with this change can be a challenge for many businesses. Cadspec work with your team to not only pass on our knowledge, but to teach delegates how to adapt to change and equip them with the resources needed for the future.

- Autodesk Authorised Training Centres in Worcester, Pencoed, Bristol, Derby and Leeds

- Our trainers and engineers invariably come from the core industries that we support

- All trainees receive official Autodesk Course Certificates

Software

Autodesk's world-class software enables small projects to have a big impact. From manufacturing to architecture, building and construction, harness the power to make anything.

Cadspec established since 1989 are a leading UK partner of Autodesk software. We have evolved with the design office and seen it go from manual drafting to digital and understand the ins and outs of industry transformation like no one else. Whether you're interested in the next generation 3D mechanical design, advanced manufacturing software (CAM), product simulation, cloud-based platform for effective team collaboration and design revelation.

Or alternatively a smart system for BIM with inbuilt features for architectural design, MEP and structural engineering; our expert team are able to evaluate your business needs effectively and help implement an efficient software solution into your design process. Cadspec have competitive solutions and industry specific knowledge available with both online and offline purchasing options to suit your business requirements. Contact our team for an honest and non-committal evaluation.

- Complete suite of Autodesk software available

- Autodesk Subscription, now you can easily scale up the number of licenses when you need them and scale back when you don't.

- Our product specialists all have industry experience

Consultancy & Support

We're not only Autodesk resellers, we provide a comprehensive support service from desk assistance to onsite visits. Our expert team are here to support your business to grow.

Here at Cadspec, we approach each client based on business drivers rather than just a CAD/CAM perspective. Our team are made up of a variety of industry experts with a great deal of practical knowledge and experience with a passion for what they do. As part of the Stanford Marsh Group, we're in a unique position to help your business to prosper, led by professionals that have been exposed to a variety of industries with specific design and manufacturing needs. This makes our team resourceful, able to adapt to change and be constantly ahead of the game.

Whether you're looking for local software support you can rely on, or long term project advice and management, we'll carry out a comprehensive assessment and assign the most qualified member of our team to your business needs. Cadspec have an extensive history helping customers to design and make anything, whether that's product development, CAM and post-processing, design for additive manufacturing or architectural, engineering and construction project development and collaboration.

- Industry Insight - technical expertise in the Manufacturing and AEC sectors

- Consultative approach - software development from a business perspective

- Comprehensive - proven application engineering, platform development, and project management to ensure the success of every solution

BIM

Cadspec's dedicated BIM consultancy team strive to understand your business's challenge and build an effective solution that helps you stay comprehensive, current, and competitive.

We are specialists in providing solutions and services that will improve your BIM business performance. With a large team of dedicated specialists, we're committed to providing outstanding solutions to the architectural, civil, structural, building services, mechanical and electrical industries.

Our team strive to understand your BIM process, take on board your challenges, and build a solution that is aligned with your goals. The Cadspec consultancy team will work on site with you to come up with an effective solution which will help you get more from your investment, increase value, and improve your productivity.

- BIM for Architecture - improving building performance, and collaborate more effectively throughout the project lifecycle

- BIM for Construction - digitise your construction site and connect project information from design through to construction and handover

- BIM for Manufacturing - provide structured digital product information that can be exchanged with supply chain partners
