

Fire fighting water storage solutions

We are pleased to introduce our new fire protection brand, **firetanQ™**, which covers both cylindrical galvanised mild steel and sectional GRP tank products.

As a design, manufacture, installation and commissioning specialist, Balmoral Tanks has been widely involved in the UK and international fire protection market for over 15 years. Our knowledge and understanding of the applicable approval authorities ensures our products are delivered in accordance with all current standards.

Balmoral firetanQ offers the following benefits:

- Internal governance and compliance as Balmoral's recognised fire protection tank range adhering to BS EN 12845:2015+A1:2019
- This is the CEN standard covering all aspects of fire sprinkler systems and is available on the BSI website, including a technical document that references specific aspects of firefighting storage tanks and industry-recognised standards
- Material standards compliance in line with design life/life-to-first-maintenance expectations of industry
- Full traceability on design, manufacturing, installation and commissioning in line with industry standards. This includes design and engineering calculations duly signed off by third party chartered engineers
- Fully supported by Balmoral Tanks' product warranty scheme

Every tank installation is supported with a fixed nameplate, shown here, allowing direct and indirect clients the ability to identify a tank by size, date, capacity and Balmoral project reference number.

The benefit of this is the alignment on the traceability and audit requirements should clients need to carry out supplier and/or product checks at any stage.

We are committed to providing the market with compliant products in line with recognised approval standards and are available to discuss your fire protection projects. Please contact us for further information.
