Dainite products have been continually produced by the Harboro Rubber Company since 1894.

The company remains in Market Harborough (at the original heart of the UK's footwear industry between Leicester and Northampton) under the leadership of the original founders family. Dainite is the trade name established from the local phrase describing the company as the 'day and night' mills; as the company worked around the clock.

Right up until the present day, the company's position in Market Harborough is at the centre of the UK shoe manufacturing trade the very first products were soles & heels. The first invoice dated 9th October 1894 being for 'women's red soles' and 'black rubber soles'.

Footwear products have always played a prominent part in the life of the company. Consistency and dependability has been the key to the company's success and it has always concentrated on producing products of the highest quality.

This reliability has ensured its success and today it continues to be a key supplier to prestigious companies such as Crockett & Jones, Allen Edmonds, Church's, Barker and Cheaney. Our export market for products continues to grow worldwide along with the reputation of the Dainite brand.

The Dainite studded sole is one of its most widely known and used products. Its original design is as valid today as it was at the beginning, providing comfort and grip in all conditions, while not attracting or storing dirt. Shoes are easily wiped clean as there are no cleats or heavy grooves to hold the dirt. The studded sole successfully achieved this aim whilst maintaining a smart timeless styling. The sole is popular today as ever!

Proud of our past, but excited about the future.

Dainite is part of our business however we do a whole lot more!

Significant investment has been taking place at Harboro since our factory move and this will continue in the future. This vision has enabled Harboro to supply into competitive markets sectors from Automotive, Electronics and Formula 1, through to large mouldings for Oil & Gas, aerospace and engineering components. Ongoing investment is continuing our drive to increase efficiencies and ensure repeatable quality in the manufacture of custom rubber mouldings. This is improving operational performance and generating opportunities to win new work packages with existing and new customers.

As a company many of the employees are based in surrounding towns and villages and Harboro remains a staunch supporter of the local neighbourhood. **As a company we are proud to state that Harboro Rubber has UK manufacturing as the foundation of the business.**

The effort Harboro places into our stringent commitment to quality and repeatability, support our customers and ensure as a company we can be depended on to supply from our UK base for many years to come.

Reliability has ensured our success and today we continue to be a key supplier to prestigious companies

Loake
SHOEMAKERS

"Dainite traditional Rubber Soles have stood the test of time with Loake and our customers since we first introduced them to the range in the 1980s. Utilised on a variety of styles in our much-admired 1880 range from rugged country boots to more formal shoes feedback has proven that they provide excellent comfort and grip in all weather conditions, while the exclusion of heavy grooves in the design helps to retain a cleaner, more elegant appearance essential for the cold and wet winter months!"

Built to last British made exclusive Soles and Heels

The Dainite studded sole is one of its most widely known and used products. Its original design is as valid today as it was then, providing comfort and grip in all conditions, while not attracting or storing dirt. Shoes are easily wiped clean as there are no cleats or heavy grooves to hold the dirt. The studded sole successfully achieves this aim whilst maintaining a smart timeless styling. The sole is popular today as ever!

The Dainite sole is an alternative to a traditional leather sole for those who want a slim line and increased grip

The iconic stud design does not hold dirt like a lug sole does, so it stays clean

British Made Since 1894

Semi-circular protrusion to slow wear to the heel
