

Do you need a new ERP System?

Key symptoms to look for in your business

What is ERP?

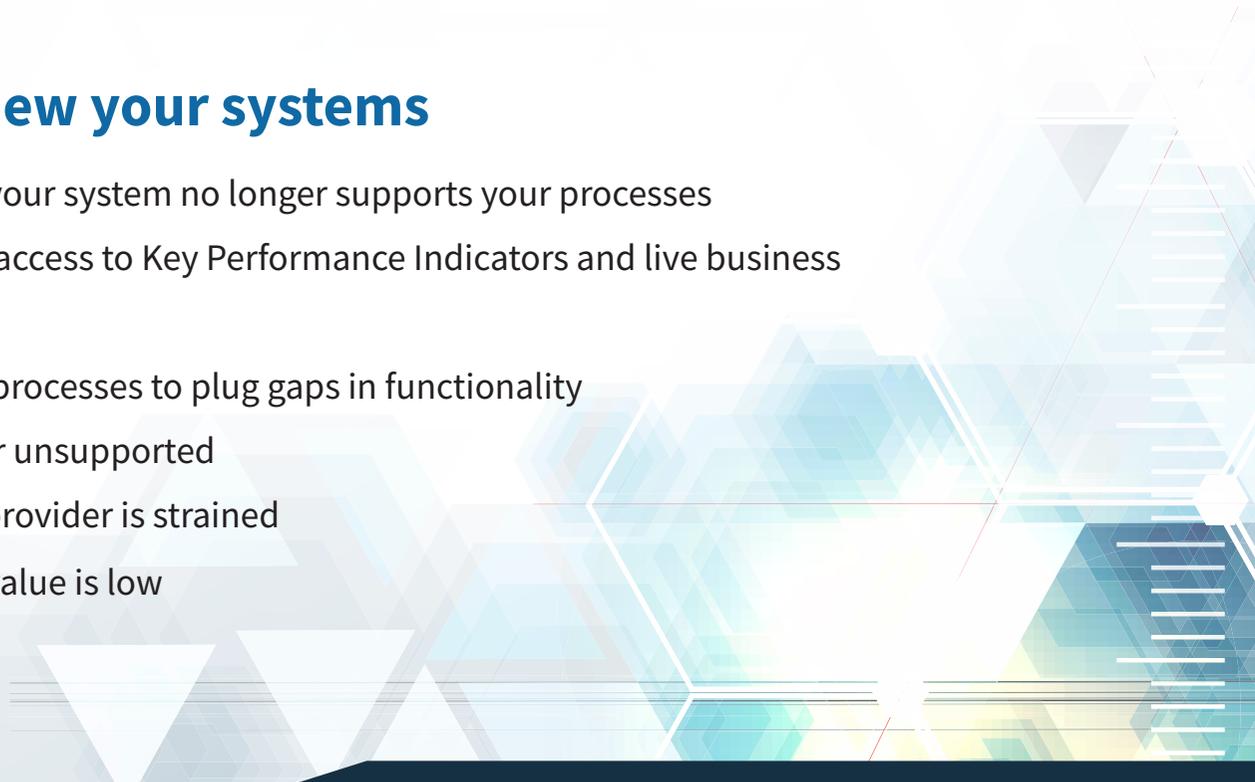

ERP systems are primarily unifying tools, in that they bring important company processes like manufacturing, finances, inventory management, customer relationship management or product data all under one umbrella. This ensures different departments within the business can communicate effectively and carrying out their tasks and activities using one system and accessing the same data.

The background of the lower half of the page features a complex, abstract geometric pattern. It consists of various overlapping shapes, including hexagons, triangles, and lines, in shades of light blue, teal, and white. The pattern is layered and creates a sense of depth and modernity.

Key symptoms to look for in your business

Key signs you need to review your systems

- Your business model has changed and your system no longer supports your processes
 - Reporting is difficult or impossible and access to Key Performance Indicators and live business critical information is problematic
 - You're using spreadsheets and manual processes to plug gaps in functionality
 - Your current system is outdated and / or unsupported
 - You're relationship with your software provider is strained
 - Your current system costs are high but value is low
- 
- The bottom half of the slide features a white background with a complex, abstract geometric pattern. This pattern consists of various overlapping shapes, including triangles and hexagons, in shades of light blue, teal, and grey. Some shapes are solid, while others are semi-transparent, creating a layered, digital aesthetic. The pattern is most prominent on the right side and fades towards the left.

What are the early warning signs a change is needed?

- Jobs and activities are taking longer to complete
 - Complaints about the system(s) being slow or containing inaccurate data
 - Reports within the system(s) requires other means of verification
 - The increase of repetitive tasks, adding to staff workload
 - Inefficiencies impacting on customer service
 - Cannot change to support smarter methods of working
 - Excessive paper trail
- 
- A decorative graphic on the right side of the slide, consisting of overlapping, semi-transparent geometric shapes like hexagons and triangles in shades of light blue, teal, and white. The shapes are arranged in a way that creates a sense of depth and movement, resembling a modern digital or data visualization style.

So why replace your current software?

The most common reasons to change to a new software rather than upgrade:

- Lack of functionality
- Outdated technology
- Cannot integrate with new technologies
- Inability to scale

As your business grows or changes, your needs will change as well. Regular review of processes will determine whether the system you have in place is still suitable.
