Materials Handling  
& Process Solutions

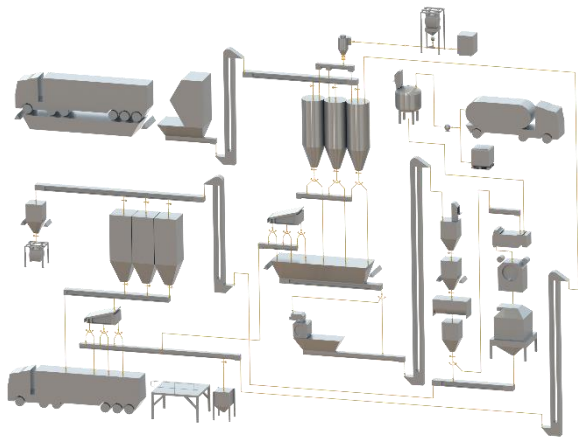

## What we do...

We have over 30 years' experience of providing solutions to the process engineering industry for clients across Yorkshire and the UK.

We produce standard and bespoke solutions with the knowledge and expertise to design and manage your project from start to finish. We are a 'can-do' business that takes pride in the loyalty and experience of our team; from Project Designers, Metal Fabricators, Site Installers and Project Managers we design and supply the best solutions to our customers.

## Process Machinery and installation service

Design, manufacture and install components for materials handling process industries...

ISF offer a full range of services including concept/feasibility studies, design, manufacture and installation of handling and processing systems and Project Management from start to finish.

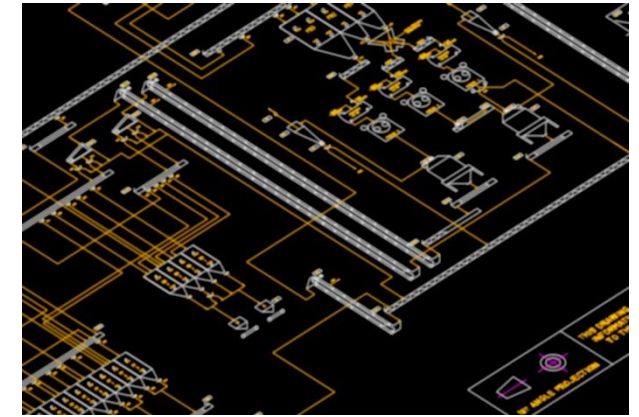

## Specialist steel fabrication

We provide a full fabrication service whether you require a standard or more bespoke product.

We can meet your requirements by fabricating a product using the latest CAD software. Utilising the technology, we are able to give the quickest available lead times, ensuring that you have the right component, at the right time and at the right cost.

Our design office is linked to the factory floor machinery via CNC technology enabling high accuracy cutting and forming of a wide range of sheet metal materials.

## Design and project management

We work closely with you to produce our own designs and manufacturing drawings that meet your requirements.

Advising on the best solution to solve your problem and improve your system, we ensure our designs get the best result for your processing requirements using the latest technology.

We provide complete management of the project, ranging from initial budget costing and working drawings to manufacture and installation. Our professional in-house project team provides technical support, 3D Solidworks or Autocad drawings, along with health and safety documents for each contract, working to CDM regulations and the relevant applicable British standards.

We are also qualified to serve as Principle Contractors on site.
