**Trusted.
Innovative.
Collaborative.**

Our decades-long global track record is built on outstanding levels of customer service. We continually drive efficiencies and add value to our client base through our end to end market offering from design to installation, commissioning and after sales care.

Since 2018 we have invested more than £20m in our 150,000sqft (14,000sqm) state-of-the-art design and manufacturing facilities as well as a continuous learning programme for all staff. We believe we have the most technically advanced production facilities in the industry supported by unrivalled levels of expertise across the whole operation.

Our longevity is proof of our success; we're here for the long term.

Operating sectors

Producing what is believed to be the most comprehensive range of tank products from a single source, civil engineering, firefighting, potable/non-potable water, anaerobic digestion, wastewater, desalination, drainage and aquaculture are key sectors for the company.

Why choose Balmoral Tanks?

At Balmoral, customer focus is a recognised value. It's not aspirational, it is real and every member of the team understands its meaning and, importantly, how they can positively influence it. Customer focus is an attitude which permeates the organisation.

To ensure this mind-set is sustained several initiatives have been put in place. A range of customer-driven key performance indicators are measured regularly while a weekly service level score is generated from every part of the business and shared across the company. This level of customer care, complemented by unrivalled manufacturing assets, leading industry personnel and effective management sets Balmoral Tanks apart in the global water industry.

To put it another way, Balmoral Tanks is not just another tanks company.

Product solutions

Epoxy coated steel tanks

efusion® is the brand name for Balmoral Tanks' in-house steel panel epoxy coating. This fusion bonded epoxy treatment provides a highly resistant coating to the tank panels.

The benefits of epoxy coated steel tanks include higher durability to impact, lower cost manufacturing, lower carbon footprint and more efficient design principles.

Glass fused to steel tanks

Balmoral's enamel system combines the strength of steel with the corrosion and scratch resistance of glass.

Compared to other spray application methods, which often use inorganic clays to suspend the particles in water, enamel powder coating provides the proven optimal purity. This technical advantage combined with Balmoral's process represents a new level of excellence in glass fused to steel tanks and silos.

Product solutions

Cylindrical steel tanks

Balmoral cylindrical sectional tanks are available in aluminium, galvanised, stainless steel, powder and epoxy coated options and hold FM Approval for fixed fire fighting sprinkler systems.

The range of materials on offer provides customers with cost effective and project specific options in the fire protection, potable and irrigation water storage sectors.

Roof structures

Offering a wide range of roof options, Balmoral Tanks provides various solutions for new and existing storage tanks. The company's roofing range covers a variety of specification demands - from simple debris-type roofs through to full, gas tight digester options.

All Balmoral roof structures are designed in-house, meaning the company offers the most appropriate solution while controlling delivery and service demands.

Product solutions

GRP sectional tanks

With an unrivalled reputation for quality and service Balmoral offers sectional tanks, which can be pre-insulated, ranging from 1m³-10,000m³ litres capacity and erected to a height of 4m in 1m and 0.5m increments.

These tanks are designed and manufactured to BSEN 13280 standards and carry WRAS approval for potable water storage. All panels are fully tested to resist pressures in excess of six times their working pressure.

GRP one-piece tanks

Balmoral GRP one-piece tanks are manufactured to BS13280:2001 standard using high quality glass reinforced polyester (GRP) resins.

The tanks comply with UK water supply regulations 1999 and have been tested and approved by WRAS.

Services

Tank installation

Balmoral Tanks provides full installation services for all products. On major projects a detailed pre-start site survey is included as standard and this can be made available for all projects on request.

A network of installation teams covers the UK and also provides international supervision and/or installation services. All installation teams have attained Authorised Installer Registration Scheme (AIRS) approval, under which they are regularly audited.

Technical services

Balmoral Tanks' technical services team provides comprehensive inspection, maintenance, repair and refurbishment services on all tank products whether they are of Balmoral origin or not.

Water industry services

Balmoral Tanks retains a majority shareholding in Tamworth-based Water Environmental Treatment Ltd (W.E.T) to service the legionella compliance and water industry services market.

W.E.T operates throughout the UK and has been providing legionella sampling and risk assessments, water hygiene monitoring services, tank cleaning and remedial works since the first edition of ACoP L8 was published by the HSE in 1991.

HSEQ and sustainability

Balmoral acknowledges the importance of health and safety and is committed to providing a safe and healthy working environment for its employees, subcontractors and visitors, on or off-site.

Balmoral Group is fully compliant with environmental regulations and recognised industry standards and continually seeks to adopt solutions to protect the natural world.

The company acknowledges that environmental factors form an integral part of its business responsibilities and enable the company to demonstrate an ethical, effective and sustainable approach to all operations.

It is also recognised that provision must be made to accommodate the needs of future generations. To do this, Balmoral continually evolves its processes and services, obtains optimum return on resources and is proactive and systematic in appraising environmental performance.

Balmoral Tanks is certified to ISO 9001, 14001 and 45001 for quality, environment and safety.

Core values

Each Balmoral business unit is run by defined management and operations teams that are wholly responsible for their unit's profit and loss activity. All personnel are committed to the company's core values and its philosophy of continuous improvement.

Customer focus

Leading and working together as a team to deliver high quality products on time at the best possible price with no surprises.

Respect

Treating clients, colleagues and suppliers as we wish to be treated ourselves; with respect and decency.

Integrity

Reliability, flexibility, honesty, openness and fairness. Supporting clients, colleagues and suppliers at all times with a focus on the common end goal.

Accountability

Being proactive in setting and achieving objectives. Taking responsibility in one's role and enhancing the company reputation at all times.

Innovation

A commitment to the company's philosophy of innovation, continuous improvement and clear communication, internally and externally.

Motivation

Maintaining a focus on aligning efforts and energy to achieve common goals, ie, successful projects. Constantly seeking to add value.
