## The Flexible Automation Solution

**BAUROMAT**  
Robotic & Automation Systems Integrator

Robots have, for too long, been resigned to doing one job. But things are about to change...

**BAURO-MATE** is Bauromat UK Limited's flexible application robotic system, meaning the robot can be used for more than one job.

Designed in two halves, **BAURO-MATE** separates the robot from the application, giving the customer complete flexibility from a single automated system.

Have multiple processes that don't run simultaneously? **BAURO-MATE** is the ideal solution. Simply connect the first application half and run the operation for as long as needs be. When it's time to switch over, just unlock it, wheel it away and fix the other application half to the robot.

Compact and easily moved, the two halves are secured and locked together precisely without compromising the robot's position.

Available in a variety of designs, featuring conveyor systems, turntables and drawers, **BAURO-MATE** can be designed specifically with the customer's manufacturing needs in mind.
