COMPRESSED AIR LEAK DETECTION

HUGE SAVINGS

Between 20-40% of your generated compressed air is being lost due to leaks. Therefore, you will be using more energy than required and increasing the running hours which means you'll need a more frequent service.

1. Locate Leaks

Our technical team use ultrasonic leak detectors to pinpoint leaks in compressed air systems, even during noisy production periods.

2. Measures & Photographs

The leak detector measures and photographs the specific location of a problem - even the smallest of leaks can be identified!

3. Survey Report

At the end of the survey, a report is produced outlining the leaks and costs to repair with support offered from our technician.

Call us today on **0800 021 6800** to
to schedule a leak detection survey.
